206,63 g

How to use

The **diffusion system** of the mikados, works by introducing the rattan rods into the glass bottle, allowing the absorption of the liquid through its pores and spreading a delicious perfume through the rooms of the home.

The **rattan rods** are composed of a vegetable fiber whose capillarity allows the diffusion of the aroma in a progressive and natural way without the need for alcohol or electricity consumption. Therefore it is not advisable to remove those that come with the mikado.

In addition, they function as a **decorative element** of elegant and exclusive design.

Usage recommendations

To perfume your home properly:
remove the cap and insert the 8
wooden sticks.

The first 4 days we will turn all the rods
once a day, in order to absorb the oils.

After these 4 days, we will go around
only once a week, or when we want to
intensify the aroma.

General advise

- ❖ **Additional tip 1:** We recommend regulating the intensity of the home perfume by adding or removing wooden sticks from the mikado, taking into account that the more sticks, the more perfume this mikado.
- ❖ **Additional tip 2:** We recommend storing the cap of the mikado container and cover the diffuser in case of leaving a few days from home. Leave the wooden sticks soaked on a newspaper or magazine. During those days the wooden sticks will perfume your stay.
- ❖ **Additional tip 3:** We recommend not placing the aromatic diffuser in an air stream or where the sun falls directly on it.
