

Ambielectric Environmental Hygiene Line

After the alarm generated by Covid 19 at Ambielectric we have created an **Environmental Hygiene Division**, developing products to improve people's lives, creating more hygienic environments free of viruses and bacteria.

- **New aromas of environmental hygiene (HA) for electrical evaporation and nebulization**
- **Soap dispensers for hand disinfection**
- **Hydroalcoholic gel (70% alcohol) and gel with quaternary ammonium for hands cleaning**
- **Disinfectant liquid for surfaces with quaternary ammoniums**

All our environmental hygiene products comply with current legislation in force and we have safety data sheets on all of them.

No environmental sanitizer guarantees total protection against Coronavirus, so we recommend supplementing its use through personal protection and hand cleaning.

Ambielectric Environmental Hygiene Line

Sanitizing aromas for electric diffusion and nebulization

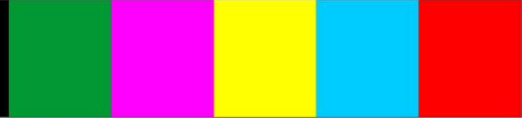

Aromatize your space while creating a more hygienic and healthier environment with our sanitizing evaporation system our nebulizers.

Reference	Description
PHAP 100	Balsamic aroma with wild notes ideal for environmental hygiene. Helps breathing
PHAP 110	Mixture of aromas studied to keep environments clean. Citrus notes. Very soft clean smell.
PHAP 120	Two in one. Environmental sanitizer and repellent for flying insects. Citric smell, very pleasant to smell. It doesn't tire.

- Manufactured with natural essential oils with sanitizing properties
- Do not contain alcohols or quaternary ammonia
- Formulated with natural components with antiviral, antibacterial and antifungal properties
- Totally innocuous and with the possibility of being used in spaces with people inside

* This product should only be used in Ambielectric electric diffusers

Ambielectric Environmental Hygiene Line

Sanitizing aromas for electric diffusion

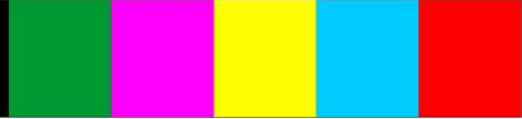

Effectiveness of systems for air sanitization

The chemistry for air disinfection is very complex when dealing with highly volatile particles. Very high concentrations of toxic sanitizing components would be necessary to generate results, which would also have a very limited temporal effect.

Ambielectric diffusers, (hot evaporation devices), are the best system for the emission of sanitizing compounds into the environment, due to their smooth expansion that covers all the space in a room.

The system also provide healthy effects because people or pets do not breath drops or micro-drops that will always be more harmful.

Ambielectric Environmental Hygiene Line

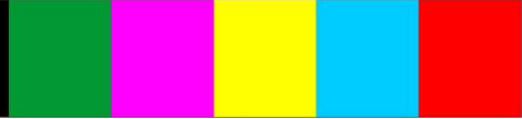

Soap dispenser for hand disinfection

Technical Specification	
Material	ABBS
Capacity	900 ml
System	Antidrop valve
Dosage	1 ml Liquid gel
Button	Manual, ergonomic
Empty weight (net)	0,424 kg
Lock	Plastic key and lock

Soap dispenser with bottle

- Made of high quality, robust ABS
- Compact size and anti-vandal characteristics
- Ideal for toilets with high traffic
- Soap dispenser with bottle for hydroalcoholic gel and other liquids
- Ergonomic and versatile design, easy to adapt to any space
- Lock with standard security key, supplied with the product

Ambielectric Environmental Hygiene Line

Hydroalcoholic gel (70% alcohol) and hand gel with quaternary ammonium

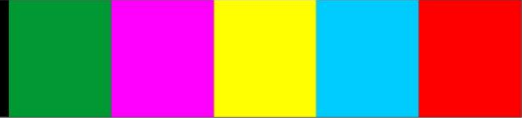

Hydroalcoholic gel (70% alcohol) 5L jerrycan

Hand gel with high alcohol content with a powerful disinfecting action for the hands.
Orange aroma that conveys a clean feeling
